INFORMATION BULLETIN / PUBLIC - BUILDING CODE REFERENCE NO.: LARC Effective: 01-01-2017 DOCUMENT NO. P/BC 2023-004 Revised: 01-01-2023 Previously Issued As: P/BC 2013-004

# WOOD FRAME PRESCRIPTIVE PROVISIONS ONE STORY RESIDENTIAL CONSTRUCTION ONLY 

(Formerly known as Type V Sheet)
The wood frame prescriptive provisions are for one and two family dwellings and townhouses of wood frame construction, not exceeding one story in height. This Information Bulletin is for information and reference only and is not a substitute for accurate drawings prepared for each proposed construction project.

LARC refers to the Los Angeles City Residential Code. The number following R references the code section within the Los Angeles City Residential Code.

All buildings erected using provisions detailed herein must comply with restrictions listed below:
a) Roof and floor boundary elements shall not cantilever past exterior wall line(s) below.
b) This prescriptive provisions shall not be used for irregular structures located in Seismic Design Categories C, Do, D1, and D2 per 2023 LARC Section R301.2.2.2.5.

## FOOTINGS ON EXPANSIVE SOILS

Footing systems on expansive soil shall be constructed in a manner that will minimize damage to the structure from movement of the soil. All soil in the City of Los Angeles is considered expansive unless proven otherwise by an approved soils report.

1. Depth of footings below the natural and finished grades shall not be less than 24 inches for exterior and 18 inches for interior footings.
2. Exterior walls and interior bearing walls shall be supported on continuous footings.
3. Footings shall be reinforced with four $1 / 2$-inch diameter deformed reinforcing bars. Two bars shall be placed 4 inches from the bottom of the footing and two bars within 4 inches from the top of the footing. Reinforcement shall have a minimum 3-inch concrete cover for concrete cast against earth and reinforcement not exceeding $5 / 8$-inch shall have minimum 1-1/2-inch concrete cover when not cast against earth.
4. Concrete floor slabs on grade shall be placed on a 4-inch fill of coarse aggregate or on a 2-inch sand bed covered with a minimum 6 mil moisture barrier membrane. The slabs shall be at least $3-1 / 2$ inches thick and shall be reinforced with $1 / 2$ " diameter deformed reinforcing bars. Reinforcing bars shall be spaced at intervals not exceeding 16 inches each way.
5. The soil below an interior concrete slab shall be saturated with moisture to a depth of 18 inches prior to placing the concrete.
6. All drainage adjacent to footings shall be conducted away from the structure by a 3 - ft wide sloped apron draining into an approved non-erosive device.

## ENERGY REQUIREMENTS

All work must comply with the State of California Title 24 Energy Requirements.

## BRACING REQUIREMENTS BASED ON SEISMIC DESIGN CATEGORY

| Roof/Ceiling Dead Load $=15-\mathrm{psf}$ <br> Wall Height = $10-\mathrm{ft}$ <br> Floor Dead Load = 10-psf <br> Braced Wall Line Spacing $=25-\mathrm{ft}$ |  |  | Minimum Total Length of Braced Wall Panels Required Along each Braced Wall Line <br> (ft) |  |
| :---: | :---: | :---: | :---: | :---: |
| Seismic Design Category (SDC) | Story Location | Braced Wall Line Length | Methods GB ${ }^{\text {a,d }}$ and PCP ${ }^{\text {b, d }}$ | Method WSP ${ }^{\text {c }}$ |
| SDC $\mathrm{D}_{2}$ |  | 10 | 8 | 4 |
|  |  | 20 | 16 | 5 |
|  |  | 30 | 24 | 7.5 |
|  |  | 40 | 32 | 10 |
|  |  | 50 | 40 | 12.5 |

(a). Method GB (Gypsum Board) = $1 / 2$-in. minimum thickness gypsum board with 1-1/2-in. galvanized roofing nail, or 1-1/4-in. screws, Type W or S . for exterior sheathing, or 5 d cooler nail, 0.086 -in. diameter, 1-5/8-in. long, $15 / 64$-in head for interior gypsum board. Maximum fastener spacing shall be 7 -in. o.c. at panel edges, including top and bottom plates, and along intermediate supports. When method GB panels are applied to only one face of a braced wall panel, the minimum total length in the table shall be doubled. (b). Method PCP (Portland Cement Plaster) $=7 / 8$-in. minimum thickness Portland cement plaster with $1-1 / 2$-in., 11 -gage, $7 / 16$-in. head nails at 6 -in. spacing ( 16 -in stud spacing required). $1 / 2$-in. minimum gypsum wallboard shall be installed on the side of the wall opposite the bracing material, except when the minimum total length of braced wall pane in the Table is multiplied by a factor of 1.5 .
(c). Method WSP (Wood Structural Panel) $=15 / 32-\mathrm{in}$. minimum thickness wood structural panel with 8 d common (2-1/2-in $\times 0.131-\mathrm{in}$.) nails at 6 -in. spacing along panel edges, 12 -in. spacing at intermediate supports, and $3 / 8$-in. distance to panel edge. $1 / 2$-in. minimum thickness gypsum wall board shall be installed on the side of the wall opposite the bracing material, except when the minimum total length of braced wall panel in the Table is multiplied by a factor of 1.5.
(d). Method GB and PCP braced wall panel height to width ratio ( $\mathrm{h} / \mathrm{w}$ ) shall not exceed 1:1.
(e). Multiply required braced wall panel lengths specified in the table by 1.2 when combined Roof Ceiling Dead load is between 15 psf and 25 psf.
