DEFINITIONS AND ABBREVIATIONS GOVERNING L.A. CITY FABRICATORS

In order to inform the industry of the terms and expressions used by the Materials Control Section and applicable to fabricators, the following definitions and abbreviations are adopted.

Definitions

Structural steel - Any steel identified in UBC Standard 22-1

Sheet steel - Steel 3/16 inch or thinner in thickness and, when welded, is regulated by AWS D1.3

Rebar - Any material that conforms to Building Code Section 1903.5.1 except prestress tendons.

Note: Rebar and non-ferrous metals are subject to additional requirements and not part of an approval unless listed with the primary classification.

Type I fabricator - The personnel and equipment at a specific location which has been authorized to do work which, if done at a construction site, would be subject to certain inspection requirements of the Los Angeles Municipal Code.

Type II fabricator - This classification has been omitted by the Department as no longer within the scope of authority. The standards for a Type II license have been assumed by the State of California.

The following list has been established to standardize the symbols used to identify product process and materials used by Licensed Fabricators.

<table>
